

FUJI MARGIATI

Prompt Engineer | AI Automation | LLM & NLP Systems Designer

Jakarta, Indonesia | +62 838-7934-4981 | fujimargiati@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFILE

Prompt engineer and AI/NLP systems designer with 9 years of experience translating language, raw data, and business requirements into production systems and decision-ready insights. Designs and refines prompts for LLM-based sentiment and ABSA classification, mood and sentence-type tagging, issue/sub-issue detection, and automated insight-report generation used across 20+ industries. Owns concepts end to end - from definitions, taxonomies, metrics, formulas, and workflow logic to crisis early-warning, anomaly detection, sentiment-stack evolution, and client/report automation. Builds working systems through AI-assisted development using Claude, ChatGPT, Gemini, DeepSeek, and Kimi.

CORE SKILLS

- **Prompt Engineering & LLM Systems:** Prompt design and refinement for sentiment, ABSA, mood, sentence-type, issue/sub-issue classification, structured analytical workflows, automated report generation, and MCP tooling.
- **NLP & Language Intelligence:** Sentiment evolution (rule-based -> ABSA -> LLM), NER, BIO tagging, industry taxonomy design, spokesperson detection, label recommendation, and multilingual NLP systems covering Indonesian, English, Malay, and Vietnamese.
- **Detection & Decision Systems:** Crisis and anomaly detection, engagement-velocity and volume-based signals, baselines, thresholds, sequential state machines, false-alarm controls, and a 17-detector anomaly framework.
- **Data & Analytics:** PostgreSQL, Python for data analysis and workflow prototyping, Google Data Studio, Railway, and raw-data-to-business-decision analysis.
- **Workflow & Client Automation:** Insight-report automation, GEO and EVO reporting, client briefs, sales decks, onboarding workflows, and end-to-end translation of business needs into reusable AI processes.

PROFESSIONAL EXPERIENCE

Dataxet Sonar - Jakarta, Indonesia

Jul 2017 - Jul 2026

Media-intelligence company analyzing sentiment, trends, and public conversation across digital channels.

Linguistics Manager

Feb 2023 - Jul 2026

- **Built Cogan end to end** - an LLM-powered media-intelligence platform and flagship project supporting classification, database analysis, analytical tools, and automated report generation across 20+ industries.
- **Wrote and refined the prompts** powering Cogan's LLM-based sentiment, ABSA, mood, sentence-type, and issue/sub-issue classification, as well as its skill-driven insight and report generation.
- **Designed the MCP server** connecting Claude to a PostgreSQL database deployed on Railway, enabling structured database access and reusable analytical workflows.
- **Built a 17-detector anomaly-detection engine** across six detector families to identify data-quality and reporting anomalies, supported by a library of analytical tools and COPY-based bulk data loading.
- **Designed Smart Alert** - a crisis early-warning system for social and online media using prompts for issue/sub-issue detection, engagement velocity, story-based volume, historical baselines, false-alarm controls, and a sequential NORMAL > WATCH > HOT > CRISIS state machine.
- **Led the sentiment engine's evolution** from rule-based classification to ABSA and production LLM-based sentiment prompting, including production classification for sentiment, mood, and sentence type.
- **Automated insight and client workflows** by designing prompt-driven GEO and EVO report generation and the client journey from initial brief to sales deck and onboarding.

Sr. Data Analyst

Jul 2017 - Feb 2023

- **Produced weekly and monthly client reports** by translating large volumes of social and online-media data into clear narratives, visualizations, and recommendations for brand health, campaign performance, and public-conversation analysis.
- **Developed sentiment-analysis frameworks** using NLP, ABSA, BIO tagging, and NER for deployment across 20+ industries and various clients.

Sr. Data Analyst (continued)

Jul 2017 - Feb 2023

- **Built the original rule-based sentiment approach** using adjective-and-noun relationships, contributed to its evolution into ABSA, and designed industry-specific taxonomy databases from scratch.
- **Created training and evaluation datasets** for sentence-type, mood, and topic detection; authored the spokesperson-detection and label-recommendation concepts later implemented by the engineering team.
- **Extended sentiment frameworks to Malay and Vietnamese** and supported insight teams across eight platforms: X, Facebook, Instagram, YouTube, TikTok, forums, blogs, and online media.

Sonar Platform - Jakarta, Indonesia

Jul - Sep 2016

Data Researcher (Internship)

Jul - Sep 2016

- **Researched industry keywords and language patterns** for the company database, interpreted social-media data, and supported improvements to sentiment and mood-tagging accuracy.

SELECTED WORK

Cogan - LLM-Powered Media Intelligence: Flagship system combining prompt-driven classification, MCP access to PostgreSQL, analytical tools, anomaly detection, bulk data processing, and automated reporting. [Portfolio](#)

Smart Alert - Crisis Early-Warning System: System concept using engagement velocity, story-based volume, baselines, false-alarm controls, and sequential lifecycle states. [View concept](#)

Sentiment Engine Evolution: Three generations of production sentiment design: rule-based NLP, ABSA, and LLM-based sentiment and ABSA classification. [View concept](#)

EDUCATION

University of Indonesia - Depok

2013 - 2017

B.A. in Indonesian Literature (Linguistics Focus) - GPA 3.52

TRAINING & CERTIFICATION

- **Full-Stack Data Analytics - RevoU (2022):** statistics, SQL, Python, Tableau, and Google Data Studio. [Certificate](#)
- **Intensive English - LC Online (2022).** [Certificate](#)

LANGUAGES

Indonesian - Native | English - Professional Working Proficiency
